

DRIVERS

When you put the Great Big Bertha in your hands with all this technology, you're living by one rule: "Leave no yard behind."

HIGH BALL SPEED FROM NEXT GEN R•MOTO TECHNOLOGY

To get every last yard out of your driver, you need more speed. That's why we put in our Next Gen R•MOTO Technology. It provides the structure for a thinner face, leading to high ball speeds on center hits and off-center hits too.

HEAD SPEED FROM OUR LIGHT, STABLE, MULTI-MATERIAL CHASSIS

This is the best combination we've ever had of an aerodynamic head shape and multi-material lightweight club design. It's the key to generating higher clubhead speed through aerodynamics and a wide range of weight classes available to suit every swing type, from 295 to 325g.

FORGIVENESS AND CONTROL FROM ADJUSTABLE PERIMETER WEIGHTING

There's a 10g sliding weight on the perimeter of the clubhead. We put it there to add stability, and you can slide the weight for more dispersion control to hit your drives on line. You have virtually unlimited draw and fade bias options, more additional draw bias than ever before, and you get all of this without sacrificing forgiveness.

SIMPLE ADJUSTABILITY

You can quickly slide the weight to any position you want on the track. And the Optifit hosel lets you choose from 8 different configurations to tune loft, lie, and face angle.

GREAT BIG BERTHA

The Great Big Bertha Driver is back, and it represents the next frontier in driver design. This advanced adjustable driver has a light, fast, stable chassis unlike any other driver we have had before. It's a technological breakthrough, and it's built to get the most distance for ALL golfers.

So how did we make this breakthrough, you ask? Well, we optimised the multi-material chassis to generate more clubhead speed through aerodynamics and a wide range of weight classes to suit every swing type. We also developed next gen R•MOTO technology that provides the structure for a thinner face which leads to high ball speeds on center and off-center hits. And we added Adjustable Perimeter Weighting on the perimeter of the head for ball flight and dispersion control with exceptional forgiveness. Boom!

GREAT BIG BERTHA DRIVERS			
Model	9°	10.5°	13.5°
Loft	Adjustable	Adjustable	Adjustable
Face Angle	Square	Square	Square
Lie Angle	Adjustable	Adjustable	Adjustable
Length	45.5"	45.5"	45.5"
Clubhead Volume	460cc	460cc	460cc
Swingweight	D3	D3	D3
Left Hand	Yes	Yes	Custom

STOCK STANDARD SHAFT:

MRC Bassara 42g (Light, Regular)
 Mitsubishi Kuro Kage Black 50 (Light, Regular, Stiff, X-Stiff)
 Fujikura Evolution 665 Tour Spec (Regular, Stiff, X-Stiff)
