XR[®] PRO 16

For the XR Pro 16 Driver, we worked with the aerodynamics experts at Boeing to redefine what's possible with ball speed in a deeper face. To make it faster, we put in the distance technology from our completely re-engineered face and a lighter Speed Step Crown, and Boeing helped us make our most aerodynamic head shape ever. When we added all that together with lower spin and a more neutral CG bias into a 450cc head, the result was even better than we could have imagined. This is a remarkably fast and forgiving driver for players who already get a lot of distance off the tee.

This thing is fast like you wouldn't believe, with a high speed head and lower drag in the crown that, as you can guess, is going to add some serious ball speed. It's forgiving with more MOI, a stretched out Speed Step Crown, and a Center of Gravity that's lower and deeper. Our next generation R*MOTO face is also lighter and thinner for more speed all across the face. And of course, you can choose from a great selection of shaft options to fit your swing speed. You want the ultimate in ball speed and MOI for better players? We've got it right here.

DISTANCE FROM SPEED AND AERODYNAMICS

We worked with the aerodynamics experts at Boeing to reach a completely new threshold of ball speed in a deeper face. We made this a high head speed design with low drag in a 450cc head, and we did it by pinpointing the size and placement of our re-engineered shape and a lighter Speed Step Crown to save weight and add more ball speed. And with lower spin and a more neutral CG bias, XR Pro 16 is built for the distance and workability that better players are looking for.

FORGIVENESS FOR BETTER PLAYERS

This driver has the forgiveness that better players can use to their advantage, and that's what happens when you add MOI, stretch out the crown with a bigger footprint, and put in a Center of Gravity that's lower and deeper. All this forgiveness leads to more ball speed at every impact location, which can add more distance for all golfers.

EVEN MORE BALL SPEED WITH A FASTER FACE

We've stepped up our game with next generation R*MOTO Face Technology that's lighter and thinner to deliver more ball speed across the face. When you combine the faster face with the forgiveness in this driver, you can pick up a lot of ball speed, whether you hit it dead center, off the heel, or off the toe. Doesn't matter.

CHOOSE YOUR SHAFT

The XR Pro 16 comes stock with a Fujikura Evolution II TS 665 Shaft, and you can choose from our great selection of shaft options to find the one that fits your swing speed.

XR PRO 16 DRIVERS		
Model	9°	10.5°
Loft	Adjustable	Adjustable
Lie Angle	Adjustable	Adjustable
Length	45.5"	45.5"
Clubhead Volume	450cc	450cc
Swingweight	D3	D3
Left Hand	Yes	No

STOCK STANDARD SHAFT:

Fujikura Evolution II TS 665 Shaft (Regular, Stiff & X-Stiff)

XR[®] 16

For the XR 16 Driver, we worked with the aerodynamics experts at Boeing to redefine what's possible with ball speed. We engineered our most forgiving shape ever and Boeing made it fast with advanced aerodynamics and a redesigned Speed Step Crown.

This thing is big and fast like you wouldn't believe, with a high speed head and lower drag in the crown that, as you can guess, is going to add some serious ball speed. It's extremely forgiving from the larger shape for more MOI, a stretched out crown with a bigger footprint, and a Center of Gravity that's lower and deeper. For more ball speed all across the face, we added our next generation R•MOTO face that's 9 grams lighter and thinner. And of course, you can choose from a great selection of shaft options to fit your swing speed. You want the ultimate in ball speed? We've got it right here.

FORGIVENESS MEETS FAST FROM OUR MOST AERODYNAMIC HEAD SHAPE AND A SPEED STEP CROWN

We worked with the aerodynamics experts at Boeing to reach a completely new threshold of ball speed. We made this a high head speed design with low drag, and we did it by pinpointing the size and placement of our re-engineered Speed Step Crown to save weight and add more ball speed. That's how XR 16 sets the standard in aerodynamics for fast speed and more distance.

EXTREME FORGIVENESS

This driver is extremely forgiving, and that's what happens when you develop a larger shape for MOI, stretch out the crown with a bigger footprint, and put in a Center of Gravity that's lower and deeper. All this forgiveness leads to more ball speed at every impact location, which can add more distance for all golfers.

EVEN MORE BALL SPEED WITH A FASTER FACE

We've stepped up our game with next generation R•MOTO Face Technology that's 9 grams lighter and thinner and the body is lighter too, which leads to more ball speed across the face. We've taken this saved weight and redistributed it in the clubhead for even more MOI. And the face is even stronger with new 8-1-1 titanium. When you combine the faster face with the extreme forgiveness in this driver, you can pick up a lot of ball speed, whether you hit it dead center, off the heel, or off the toe. Doesn't matter.

CHOOSE YOUR SHAFT

The XR 16 comes stock with a Fujikura Speeder Evolution 565 Shaft, and you can choose from several great shaft options to find the one that fits your swing speed.
