

ODYSSEY PUTTERS

SOUND CHAMBER TECHNOLOGY

The precision milled sound chamber pocket is set behind our 17-4 stainless steel striking surface for great feedback and feel.

METAL-X INSERT W/ STABILIZING CROSSBAR

The 17-4 stainless steel insert has been chemically etched with our patented oval pattern to provide a better roll off the face. The Stabilizing Crossbar helps stabilize sound and feel across the face as well.

BLACK POWDER COAT SHAFT

Reduces glare and provides a unique, contemporary look.

GENUINE CABRETTE LEATHER GRIP

A black genuine Cabretta leather Grip Master grip with a red baseball stitch down the back delivers a premium look with amazing feel.

MILLED COLLECTION RSX

At Odyssey, we're obsessed with a never-ending pursuit to innovate in insert technology, and our latest path has led us to a deeper exploration of sound and feel. That's how we've come to the Milled Collection RSX, and as the name suggests this line is milled from 1025 carbon steel, with our best-selling #7 shape, a progressive V-Line Fang mallet, and the #001, a new take on our classic #1 shape.

Phil Mickelson has always told us that when he hits a 5-foot putt, he wants it to look, feel and SOUND like a 5-foot putt. By engineering our sound chamber technology into these putters, we've delivered a crisp sound at impact, which ensures great feedback that matches up perfectly with the speed and roll off the face. Coupling this with our patented Metal-X roll technology, the Roll and Sound Experiment has come to life.
