Product Intro:

Rogue Sub Zero is an extraordinary achievement: a powerful, extremely low-spinning, Tour-level driver packaged in a high-MOI head shape. Though designed to appeal to Tour Pros, Rogue Sub Zero is so forgiving and easy to hit that any amateur seeking lower spin is also a great candidate for it.

Rogue Sub Zero performance is spearheaded by our improved Jailbreak Technology, which drastically changes how the head behaves at impact. New, hourglass-shaped titanium bars are lighter than before, yet equally effective at stiffening the crown and sole, allowing the face to take on more impact-load to promote faster ball speed. Improved X-Face VFT Technology promotes fast ball speed across a larger part of the face. That, combined with Jailbreak, promotes a significant boost in ball speed and distance.

Rogue Sub Zero's high MOI starts with its light-and-strong triaxial carbon composite crown, which saves weight that's redistributed in the head's perimeter. We can't

emphasise enough what an astonishing engineering feat it is to make a low-spin driver with this high level of forgiveness.

Rogue Sub Zero's head shape and construction allows Callaway engineers to position the CG low and deep with a more neutral bias. This position, along the head's neutral axis (the line that runs perpendicular to the loft and intersects with the geometric centre of the head), promotes higher launch and low spin -- the launch conditions that promote maximum distance.

Two interchangeable weights (2g and 14g) in the front and back of the sole allow you to adjust spin-rate ± 200 rpm. Position the heavier weight forward to lower spin; position it in back to increase forgiveness and promote higher launch and longer carry.

Boeing and Callaway collaborated to develop the Speed Step Technology used in past Callaway metalwoods. In Rogue, we worked with Boeing to redefine the geometry of the leading edge to improve airflow to promote faster head speed.

Rogue Sub Zero offers a wide range of premium no-upcharge aftermarket shafts at 40g, 50g, 60g, 70g and 80g weights, including Aldila Quaranta, Aldila Synergy, Project X EvenFlow, and Project X HZRDUS Yellow.

Features and Benefits Summary

Jailbreak Effect for Exceptional Ball Speed

Combined power of Jailbreak Technology and X-Face VFT Technology promotes high ball speed and long distance.

Triaxial Carbon Crown for Increased MOI and Lower Spin

The largest carbon composite surface area ever in a Sub Zero model; its light-and-strong composition saves weight that's redistributed to increase MOI and align the CG with the neutral axis to lower spin.

Interchangeable Weights for Increased Spin- and Trajectory-Control

Two interchangeable (2-gram and 14-gram) to adjust spin-rate and launch angle. Put the 14-gram up front to lower spin, or in back for higher launch and increased MOI.

Boeing Aero Package for Faster Head Speed

We worked with Boeing to improve Speed Step Technology by redefining the geometry of the leading edge to improve airflow to promote faster head speed.

Premium Shaft Selection at Multiple Weights

Choose from 40g, 50g, 60g, 70g and 80g weights by Aldila and Project X.
