

A BLADE UNLIKE ANY BLADE

TRI-HOT 5K

Multi-Material Construction

These putters use multi-material construction to deliver mass properties unlike any blades on the market, yet they are classic in shape and look in a way that will appeal to the best players in the world. We use Stainless Steel, Tungsten and Milled 6061 Aircraft Grade Aluminum strategically to achieve these amazing results. With inertia levels exceeding 5K in every design and forward cg locations, we have completely re-invented the performance of a blade. Tri-Hot 5K looks like a blade, it feels like a blade, but it performs unlike any blade.

White Hot Insert

The most popular putter insert of all time is back with the original formulation, feel, sound, and performance. When Tour players and recreational golfers asked us to re-introduce it, we listened.

Red Stroke Lab Shaft

As seen on TV – especially on Sunday afternoon! Our latest generation shaft was introduced last season, and now features even better performance than the original! By shortening the steel section, we reduced the weight by seven grams. We also made it stiffer and more stable for even more consistency in your stroke, and your performance. Stroke Lab works, that's why it's winning major championships and dominating at the world's biggest events.
